**TO:** PTA Member Companies  
**FROM:** PTA Engineering Committee  
**SUBJECT:** NECA Test Call Project

Below appears an excerpt from an e-mail re: a test call project being conducted by NECA. The attachments explain the project if you are interested in participating.

“Not sure if you have seen this information from NECA regarding the Test Call Project. An earlier test has already been performed and your company may have participated in it, but I am not aware of who those companies were.

I would suggest that you consider being a “RECEIVER”, if you want to participate. However, being a receiver requires more effort on your part. You would receive test calls made by other participants, and would have to sort those test call records from your toll processing, in order to match to the test call log.

Please review the attached test call procedures and let me know if your company would like to participate. NECA will handle most of the process, but I would like to be involved and allowed to view your results, so that we can then determine if there are issues that need to be resolved. But if you would like to participate and just have NECA handle the data, then I would still encourage you to participate in at least one or more of your companies.

Let me know if you have questions and wish to participate. Please note the dates as this project is time sensitive.”
